Dr. Engelmann

Dear Sir

I venture to address you from necessity rather than merit.

I have been engaged in making out a catalogue of our flora, at the request of Judge Clinton of Buffalo, to be published by the Regents of the State University. Two or three Sagittarias and three or four Euphorbias be there one, and I cannot determine them surely.

Do you attend to the naming of such plants? If so I would be glad to send them to you.

I have heard that Professor Braun has written an article on the genus Naias. But when and where it is I know not. Can you tell me?

When collecting this Naias major in Onondaga Lake, and also Ruppia maritima there! I gathered another water plant which was without flowers or fruit and I can make nothing out of it. I possess a few specimen I believe, but will send it if you would like to see what you can do with it.

Probably Judge Clinton has supplied you with specimens of N. major, but if you want more I will gladly send them

Hoping to hear favorably

I remain Respectfully

John A. Paine Jr.

Dr. Engelmann

Dear Sir

Your cordial note and kind offer, did not reach me till Saturday night.

If I had saved duplicates I should have been glad to have sent you more specimens. Only rare things have I been collecting to preserve and those I knew not at the time – To be looked up for the Catalogue's sake.

If I had foreseen this I should have preserved specimens for you, but these are no specimens; only what I desired in my phases for future study, then to be thrown away!

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

MISSOURI BOTANICAL GARDEN

I will arrange the package thus.

1. Euphorbia lucida platyph? From Winfield.
2. Euphorbiaceae platyph? Fr. Clarke's Mills.
3. Euphorbiaceae heliosc? fr. Onondaga Lake.
4. Euphorbiaceae heliosc? " " "
5 " Euphorbia platyph. Fr. Niagara Falls.
6 Sagittaria graminea? autopl. from a Lake shore in the north woods, fifty miles north east of here. There was a large bed of them, partly under and partly out of water. The leaves were alike on all - ardest at the base. No leaves with petiole and elliptic blades on any of the whole number, not even those out of water. All were thin long triangular form.
7 Sagittaria graminea? var. From a creek-side near Utica.
8 Sagittaria variabilis? From a mill pond mud bank.
9 I do not know what to call. Sagittaria very young, with floating bulbs

9. Aquilegia canadensis Linn. Common along the lake

10. Triglochin Hastata Linn. 2 forms from Salina.

11. Potamogeton natans Linn.?

12. " " ? from Onondaga Lake. ? Suggested by Prof. Peck — Leaves becoming obovate, or spatulate! They are found near Salina along the western side of the lake

13. Chenopodium glaucum. All around the Lake. ± mitchelli

14. Salicornia ? ? Everywhere in the marshes there.

15. Cuscuta Gronovii? East of the Lake in low thicket-woods.

16 Lophotocha fasciculata, Salina, mud-banks and marshes.

17 Ruppia maritima! Abundant in the shallow water of Onondaga Lake

18 Zannichellia palustris. Rare there.

0 1 2 3 4 5 6 7 8 9 10 cm
copyright reserved
MISSOURI BOTANICAL GARDEN

19 Ranks major. In the Lake.

Have you a copy of that article by Prof Braun? I wish to read it very much.

20 25. the flowerless & fruitless Bappi quantum

Lake weed, I can do nothing with. It was abundant in the Lake, in deep water, growing to great length - many feet. I could not steel any in fruit.

You will not return many of these things, & owe the last- and no 9, if you do not tell me what they are, but if you do name them - of course I do not want to see them any more.

If you would like more of 19 17, 16, 15, 13, 10, let me know, & I will spare you as many as I can.

Please to accept Sir, my grateful thanks for your kindness and assistance.

Most truly John A Paine Jr.

Dear Sir

Your letter

of the 3d. has just reached me!

I am exceeding[ly] grateful for the determinations.

If there are any Genera or species of plants you wish me to collect for you, favor me let me know - I will do what I can.

Bitumen maritimum Judge Clinton said he found most rare of Salina, so determined by Gray. I know not the plant

• and so was not sure the large Actinotus might be it - it was so different from the smaller forms I sent.

I am glad you think Chaerophyllum glaucum native there. I do not see how it can be otherwise - it is very abundant; I shall so insert it in the Catalogue.

The Ruppia I collected only as few specimens - its value as a discovery, and so finely in fruit, I grieve not to have sent too late.

I think I can spare more Asters major but know not how much I have.

MISSOURI BOTANICAL GARDEN

I have a record of finding Potamogeton spectinatus in the lakes three or four years ago.

Another Potamogeton I gathered this last-June with the Ruppia, I wish sure - I thought - I could be sure myself - however not.

S. californica "probably Mucronata" I have put it down as S. subacea in the catalogue - of course. I sawed none of them & so mix one from another. And as I gathered it in Oct: long after frost - I cannot tell which it is. If it is S.

once you have not enough
for determination, I will

know. I am not sufficient
for these things.

Braun's Article has not
arrived. If I send any
of the various forms of the
hairs I saw on the ground,
I will see them if Braun

Dr Engelmann

Dear Sir

Almost-
ever since I arrived here
last- I have been away
from home, and have been
unable to send the plants
I spoke of.

Even copies of the Legions
Paper, came very safely
and I have wanted to copy
what pertains to it, but-
have been absent. I will
try to do so now, and return
it in a few days. I shall be
very sorry if I have thus
troubled you.

In a little package I will send you after
Trollius laxus
Viola Selkirkii
Saxifraga azoides
Primula Mistassinica
you will find more
specimens of the Salix
Salicornioides, which you
thought favorable over
S. myrsinoides. If this is
true, the species, I wish
very much to know in for
our Catalogue.
Aspl- a Calcitriche
growing on muddy banks
& few more specimens
of hordeum major
& Ruppia maritima I
did not gather as many as
I should if I had known it

important, one of my few
are all gone - I am sure some
very poor ones - but not-
such as I would wish to
have & to take your stand.
next year I will send
you some ones if I can
gather any.
Then last of all follow
two Potamogetons. The
little fellow I gathered in
shallow pools in Cascadilla
Creek, supposing it to be
P. pusillus. But it is unless
there, and I have thought
it might be the same as the
larger one below which
I took to be P. pectinatus
when I gathered it in
Cayuga Lake. I would
like to see some whole both are.

My dear Sir

I have a little Cuscuta which does not seem to be C. Gronovii and which looks more like what Judge Clinton calls C. inflexa. Is it so? I found it on Solidago altissima & also on Conyza Canadensis at Soulard Bro.

If it is C. inflexa I must ask what to do with Catalogue printed, & an Addenda immediately. Or, it is Gronovii Most truly

Yours

Dr Engelmann

Dear Sir

Your favor has just come in. The Cuscutas of the Lake [illegible] different from that of our river, I thought I made out no special characters: I looked like the one Judge Clinton sent you, which I saw fresh; and I find no description of C. reflexus — so came the question.

As to Jesuei, instead of C. Gerardi, I find and all round

Onondaga Lake. I sent
with such in Canal specimens
for comparison with
coast plants, & while
gather for & on-
Have never seen &
maritimus. The nearest-
to another coast-plant
is S. Balticus, all along
Lake Ontario, once at-
several points distant-
from the south shore.
As to Chara: there
is a var: foreltyg one in
the side craters of Lake
Ontario. I sent it at
the time to Prof Gray
who said it belonged
to the Nitella section,
but terminated the that-
he should name Chara,
& so I gave it no more

MISSOURI BOTANICAL GARDEN

I will try to go to the
Lake Country somewhere
tomorrow and obtain a trap
for you - also tubers (for
cultivation), by which it-
you propagate "Arethusa"
If I can get to get to the
Falls in Oswego river at
Fulton, Tonawanda Island - Pursh's
Habenaria, and whatever
Orchideæ I get.
I have discovered a
Utricularia elevated on
the shore of Lake Ontario,
which must be new. off of coast.
Have not been to Salmon
this year. Judge Clinton ought
to attend to his Bibliotheca there.
Cannot get Nuphar advena
flowers now to tell from sight-
and memory is already as good,
a light yellow; N. Kalmiana
deeper; which is
abundant in Oneida Lake.
Many thanks
for the Orobanche Cuscuta inflexus and Calcitrichum.
Most truly John De Paine Jr.

Geology

Chicago Oct 20th 1873

Dear Sir

I regret to report that the results of my trips were not as satisfactory as to water plants as I hoped. I found one more Characea, not described, and got no more fruit of the Oxygonotheca. This new species became plentiful - however I found in all the lakes of the Western part of the State and very common in all the lakes since visiting Ontario.

This also the only species of Lilium known in this same region and range.

I have just put up for you a little box full of its tubers, which will grow sooner & surer than seeds, of which I have none.

I have sent a few packed in the same way to Prof Caspary.

I will send you a proof of what I have to say about these Lilies. I am a new hand at such descriptions, and though you may not have seen the plants, yet you can criticise the terms in the description. I want to know if they are all right.

My dear Sir

I am extremely grateful to you for your last letter. Yours is an unfailing friendship, and I value it, more highly. From none who I have received letters of sympathy and so few offers of assistance is regarded as - a solace. I have been told that traders want nothing but brandies, and tobacco. This is a severe form of [illegible] of h. adversity

[illegible] summer climate and fertile soil of Western

about the Eastern states, and other observations equally ridiculous.

I think a great relief to turn to one who is ready to recognize, to count worthy and to seek freely and fully assist. I am desirous of acquiring that - this work is all new to me, I know that before I attempt it, and I know well-it - I am very in the effort; I long for assistance, because I consider having neither experience in writing nor a knowledge of other species to direct what to observe, so I am very willing to receive your most valuable suggestions and most grateful for your kind assistance.

Because Livera making out
a catalogue of our plants,
Prof. Farrer very generously
turns the manuscript, recommend-
ing certain matters, and
'a work' I was quite reluctant
to undertake.

I suggested to Prof Farrer the
name Lotus tulipæfera:
Can he refer the Liriodendron
to Liriodendron — full of stamens-
letter. Do I recollect
which is to be done when
Dr S dies?

I have measured many
leaves of the Cowges (= Qizes
15-17 inches, and find them
all exactly orbicular
never varying half an inch
any way. Sometimes the sides
are drawn in, but
then the end is also truncate
retuse.

As to the veins - when I came to try & force them I know how: there was a great one wh I could not like whether I - See compare to the leaves or the smaller, and at the end I decide not - count two or three short-ones, an inch or less in length. there were so many that it is an indefinite work. Notice in the leaves of R. minor, wh are 7 basal + 5 for the rib uniformly on each side the leaves I have possessed. I sent three leaves + two heads I believe. Also some poor flowers of R. tuberosa to show you the anthers. Not knowing as about the anthers of others, I cannot make decision there to by accumulate two - Linear' Please see & compare. I am quite sure however that neither R. acris Linn, nor Var minor

Dr. Gray

My dear Dr.

Excuse
delayed in leaving Lucien,
then our household goods
were much longer on the
way here than we expected,
since July just - now are we
beginning to be settled - even
to the extent - of a place for
writing. In New York I was
obliged to remain writing
many days, until I came
over often to this P.O. until
your letter arrived. I was
greatly assisted by your
criticisms and suggestions, and
my thankfulness for the help

be assured is in due proportion.
Could one think I regretted
you told me the stipules ought
go in the diagnosis: but in
New York, alone at a hotel,
without any of my books or
works of reference I could not
write the latin well, besides
no time - I had to send it
off at once. Now I dont
remember how I described the
stem, leaf - I do remember
fearing I was bad latin
and sending that - I was
not as ill shoulder.
It is strange the Catalogues
dont come along, they ought to
have been finished long ago,
and were promised last week.
As soon as received I will
send you a copy
This Nymphaea is no new
thing with me - I have known

MISSOURI BOTANICAL GARDEN ENGELMANN PAPERS

MISSOURI BOTANICAL GARDEN

It is in the marshes near Cosumpo
that for years and although
I did not examine the rhizomas
until this season; yet the
inodorous flowers and large
leaves and general size
caused me to consider it at
least as far off as a var.
from the Common N. odorata of
New England. So this summer, when Prof. Gray visited
his old home near Keene, and
looked over my proof that
was printing of the last part and
read the pages already printed
he said this "var." as I called
it and said if it really was
inodorous I had better examine
the matter thoroughly, as it
might be the N. advena of Ait.
Where upon I went again to my
old locality determined to get
the whole plant and send it to

MISSOURI BOTANICAL GARDEN

MISSOURI BOTANICAL GARDEN

him to see if it was really as he conjectured. After gathering his fruit, leaves &c I sought for roots, but found it so difficult that I actually cried with them! But soon I was ashamed of myself that cried right back again, plunged in into mud up to the knees and water to the limit of working once I became fixed in a sinking fix and thought it was all over with me! but at length by strong efforts I freed myself — but at length found a place where the roots stalks were accessible — for Sturm up and to the tubers! This was an unexpected, novel character, and I did not quit that day until I had gathered all I could carry away, so I was quite repaid for my trip.

Prof. Gray from the first regarded these tubers as a specific character and also he thought he found another in the aberrant axillus. But this has proved inconstant — the tubers however have remained unchanged

He communicated as a new species to Am. Acad.; and at the same time reserves the printing in the Proceedings for my work to go forth, as he said himself was my right and duty to name and describe and he should as well succeed to know and do it as to do it himself. This was when the oval character was considered a good one by him; what this specimen is now and erroneous will be I do not know.

I have mislaid your last, and exceedingly valuable letter, and cannot answer it as I ought; but if I mistake not you regard the tubers alone not of specific value. Well if this is so, then there is more doubt about the species than I have supposed. Prof. Gray at once said this was a good character of distinction.

MISSOURI BOTANICAL GARDEN GEORGE ENGELMANN PAPERS

0 1 2 3 4 5 6 7 8 9 10 cm
copyright reserved
MISSOURI BOTANICAL GARDEN

and it is needless to say that to me it seems a positive difference from every other species or variety. If tuber-bearing be not a specific character, what is? what can be greater?

I believe also for remarked in each of the other points of difference that they are not specific.

Very True. One alone would not be so: but put them all together in addition to the tubers and you have a very different plant.

I can easily imagine how very easy it is to err in ones study and try to get a good idea from a very poor description of an unknown plant. But to one who has ranged the north shore of Lake Ontario and visited nearly all the lakes and rivers of Western N.Y. and become so familiar with every part of the

plant, - It is all perfectly plain!
I sojourned three years in New
England and have gathered
heaps of H. odoratus, Coul- I never
saw anything like these tubers or
its huge trunks wh often float-
about- after being somehow torn up.
Its leaves never go beyond 5-7
inches in diameter, lobes not-
acuminate. flowers highly fragrant
peduncles never hoary, &c. &c. I
never noticed any connection, not-
even on var. minor, nor did I
know what- an offsend age was
until I visited Helianthus at-
Soden's last.

But- all this matters not-. I
am very sensible that- the diagno
sis is not- what it- should be,
that- the description is a very poor
one, and at that- not- in scientific
technical language, that- any
botanist- could do the work better.

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

MISSOURI BOTANICAL GARDEN

All I have to ~~say~~ is that any one who meddles with the matter without complete and extensive examination of the living plants in place, will make worse work than a novice have done. Facts not principles must guide. The living plant appears altogether different from an idea formed from another's description or from a few dry fragments. If the entire plant should be faithfully examined and compared by yourself or Prof. Gray or Prof. Caspary and pronounced to be only a form of h. odorata, I would be perfectly content. It was necessary to say something about the plant in my Catalogue which was to be closed up soon. I did not publish it for the sake of announcing it or of taking the name to myself — I suppressed it not to be distinct and one to my notice of the plant threw it in to the present form of necessity.

Thanking you again for your great kindness, frankness and more valuable assistance I remain Yours truly

ORDINATION AND CONFERENCE.—At the Ecclesiastical Council held in the First Congregational Church on Wednesday, Rev. John A. Paine, Jr., was ordained to the work of the Gospel Ministry. The public services in the evening were as follows: Address upon the Turkish Empire and charge, by Rev. Wm. J. Budington, D. D., of Brooklyn; Ordaining Prayer, by Rev. Thomas Williams, D.D., of Providence; Right hand of fellowship, by Rev. Wm. B. Brown, pastor of the candidate. Brief addresses on the subject of missions were made by Rev. Dr. Smilie, of Philadelphia, and by Rev. Mr. Ide of Stafford Springs, Conn. Mr. Paine sails in a few days to commence his labors as Professor of Natural Science in the Robert College of Constantinople. At the conference of churches held at the same place on Thursday the 30th, in which the Congregational churches of New York, Brooklyn and Pbiladelphia were largely represented, after a very full discussion upon the "True ends and proper observance of the Christian Sabbath," and after an ample collation spiced with many spicy little speeches, the following resolutions were unanimously adopted -

Resolved, That this Conference express their deep sense of the need of a weekly newspaper of metropolitan character, imbued with the spirit and doctrines of the Christian religion, consecrated to the highest interests of mankind, and characterized by intellectual capacity for the thorough discussion of great political and ethical questions.

Resolved, That we earnestly commend to the attention of men of means and enterprise and to men of thought and ability as public writers, the the expediency, without delay, of establishing a uewspaper on the basis originally occupied, but gradually and at last openly and entirely abandoned by the *Independent*.

A Committee was appointed to further the object proposed in the resolutions.

Ans - Jun 7
Am June 11

Newark N. J.
June 4. 1867.

My dear Dr Engelmann

I am to
sail for Europe in ten days,
shall be all summer going
through England, Germany
and France.

I should esteem it a great
favor if you should furnish
me with letters to botanists
and scientific gentlemen
who will be likely to take
interest in what I may
find in Turkey.

Very sincerely yours

John A. Paine Jr.
